Dear Hiring Team,

For more than five years I have been working with processes: analysing, organising and automating them with Microsoft 365, Power BI and Python. Since 2021, at ZARYS International, I have been documenting processes across sales logistics, purchasing and the warehouse, including those run in Excel and email, and turning them into system solutions or my own tools.

My strength is that I connect two worlds: I understand day-to-day operational work, and I can build the tool that improves it myself. I learn quickly and on my own initiative: over the last two years I completed two courses at infoShare Academy (Python, Django, Data Science and AI), and at HackYeah I built two projects on my own in 24 hours.

I want to keep doing what gives me the most satisfaction: analysing processes, finding unnecessary steps and simplifying them effectively, so that people can work more easily.

You can see my projects with working demos at portfolio.twapp.pl. I would be glad to talk about them in an interview.

Kind regards

Tomasz Wierzbowski
